CHIEF COMPLAINT

Right knee pain.

HISTORY OF PRESENT ILLNESS

51-year-old male presents for follow-up of persistent right knee pain. Patient reports injury approximately six weeks ago while playing recreational tennis. States that he planted his right foot while changing direction and felt a twisting sensation in the right knee. Does not recall direct impact or fall. Initially developed mild swelling and pain along the inside of the knee. Patient treated symptoms at home with rest, ice and over-the-counter ibuprofen. Pain improved somewhat during the first two weeks but has persisted. Currently reports pain primarily along the medial aspect of the right knee. Pain worsens with: climbing stairs; prolonged walking; squatting; twisting movements. Reports intermittent swelling after increased activity. Reports occasional sensation that knee is "catching." Denies complete locking. Denies knee giving way. Denies numbness or tingling. No fever or redness. Patient has decreased tennis and exercise because of symptoms.

PREVIOUS TREATMENT

Rest; ice; ibuprofen as needed; home stretching exercises; activity modification. No formal physical therapy completed. No injections. No MRI performed.

REVIEW OF SYSTEMS

Musculoskeletal: Positive for right knee pain and intermittent swelling.
Neurological: Negative for weakness, numbness or paresthesia.
Constitutional: Negative for fever or chills.

VITAL SIGNS

BP: 132/82 mmHg | **Pulse:** 72 bpm | **Temperature:** 98.0°F
Weight: 193 lb | **BMI:** 27.7 kg/m²

PHYSICAL EXAM - RIGHT KNEE

Mild effusion present. No erythema or warmth. Tenderness predominantly over medial joint line. Range of motion approximately 0-125 degrees. Pain reported with deep flexion. No gross instability appreciated. Patient ambulates without assistive device.

ASSESSMENT

- 1. Right knee pain - M25.561**
Persistent pain following twisting injury.
- 2. Right knee effusion - M25.461**
- 3. Suspected internal derangement of right knee**
Concern for possible meniscal injury based on mechanism, medial joint-line pain and intermittent catching symptoms.

PLAN

Reviewed right knee radiographs with patient. No acute fracture identified. Recommend Orthopedic evaluation due to persistent symptoms despite conservative management. Orthopedic referral placed. Continue activity modification. Continue ice as needed. NSAIDs as tolerated. Avoid high-impact activity until evaluated. Consider physical therapy and/or advanced imaging following Orthopedic evaluation. Patient agrees with plan.

RIGHT KNEE X-RAY REPORT

PATIENT	Michael Turner
DOB	11/22/1974
ORDERING PROVIDER	Emily Patel, MD
STUDY	Right Knee Radiographs - 4 Views
STUDY DATE	07/29/2026

CLINICAL INDICATION

Right knee pain following twisting injury.

FINDINGS

No acute fracture or dislocation.
Joint alignment maintained.
Mild medial compartment joint-space narrowing.
Small joint effusion.
No focal osseous lesion identified.
Soft tissues otherwise unremarkable.

IMPRESSION

- 1. No acute osseous abnormality.
- 2. Mild medial compartment degenerative change.
- 3. Small knee joint effusion.

PROBLEM LIST / MEDICATIONS / ALLERGIES

Patient: Michael Turner

DOB: 11/22/1974

MRN: GF-829403

ACTIVE PROBLEMS

Problem	ICD-10
Essential hypertension	I10
Hyperlipidemia	E78.5
Right knee pain	M25.561
Right knee effusion	M25.461
Seasonal allergic rhinitis	J30.2

CURRENT MEDICATIONS

- Losartan 50 mg tablet**
Take one tablet by mouth daily.
- Atorvastatin 20 mg tablet**
Take one tablet by mouth nightly.
- Ibuprofen 200 mg tablet**
Take 2 tablets by mouth every 6-8 hours as needed for pain.
- Cetirizine 10 mg tablet**
Take one tablet daily as needed.

ALLERGIES

Sulfonamide antibiotics
Reaction: Rash

SOCIAL HISTORY

Smoking: Never smoker **Alcohol:** 2-4 drinks/week **Recreational Drugs:** Denies **Occupation:** Accountant

PREVIOUS VISIT / INJURY NOTE

Patient: Michael Turner
DOB: 11/22/1974
Date of Service: 06/29/2026

CHIEF COMPLAINT

Right knee injury.

HISTORY

Patient reports right knee pain beginning approximately three days ago while playing tennis.
Patient states he changed direction quickly while running and "twisted" his knee.
Did not fall.
Able to bear weight immediately following injury.
Developed mild swelling later that evening.
Pain primarily located along inner right knee.
No previous major right knee injury.

EXAM

Mild right knee swelling.
Medial tenderness.
Full weight bearing.
No obvious deformity.
Range of motion intact but painful with flexion.

ASSESSMENT

Right knee sprain / pain.

PLAN

Recommend rest, ice and activity modification.
Ibuprofen as needed.
Follow up if symptoms persist or worsen.
Consider imaging if no improvement.
